Safeguarding Cloud Confidence:
The Every8.Cloud Backup Module

APRIL 2025

In today's digital world, data is your most valuable asset—and protecting it is not optional. The **Every8.Cloud Backup Module** is a built-in security and continuity feature that ensures your data, applications, and files remain safe, recoverable, and in your control. Whether you run your business entirely in the cloud or via a hybrid infrastructure, this module offers a robust, encrypted, and integrative solution for comprehensive data backup and restoration within the **Every8.Cloud** ecosystem.

WHY MIGHT YOU NEED THIS?

The **Every8.Cloud Backup Module** allows administrators to perform full or partial backups of their **Every8.Cloud** account. A backup can include:

- The entire **database and file system**,
- **Only the database**, or
- **Only files**, depending on your needs..

These backups are not mere data exports, they are **securely encrypted**, ensuring they can only be restored within the **Every8.Cloud Platform**. This closed-loop protection guards your data integrity and limits unauthorized access, even if a backup file is obtained by malicious actors.

Production Safety Net

Set automated weekly or daily backups to protect against user error, failed updates, or unexpected bugs.

Testing & Staging

Clone your production environment in a separate account using a recent backup—ideal for development or UAT testing without affecting live data.

Disaster Recovery Planning

Ensure business continuity by having redundant backups stored on Amazon S3 or OneDrive—enabling rapid recovery even in catastrophic infrastructure failure.

**SAVE DATA
SAVE STRESS
SAVE MONEY**

ON-PREMISES COMPATIBILITY

The Every8.Cloud On-Premises Edition supports full backup functionality. You can back up locally, to external storage, or to integrated cloud platforms – all while staying within your security perimeter.

KEY FEATURES

Encrypted Backup Files

All backup files are encrypted using secure algorithms. This ensures:

- Data confidentiality during transfer or storage.
- That backup files are restorable only within the Every8.Cloud Platform, protecting against unauthorized system restoration attempts.

Full Platform Snapshot

The module captures your entire application state, including:

- Marketplace and custom-developed apps and their structures
- Stored files (attachments, images, documents, etc.)
- Transactional and relational database content.

This makes it easy to create identical environments for testing, training, or rollback purposes.

External Cloud Synchronization

Need redundancy across platforms? You can configure the backup module to synchronize your backups with leading cloud storage providers:

- Amazon S3
- Microsoft OneDrive
- Dropbox.

This hybrid setup enhances disaster recovery planning while leveraging the storage solutions you already trust.

Restore-Ready Anytime

Should something go wrong — accidental deletion, corruption, or system failure — you can restore your backup with just a few clicks. The restore operation automatically ensures compatibility with the original app structure and user permissions.

DELIVERY

The **Every8.Cloud Backup Module** is available through the **Control Panel** of your **Every8.Cloud** account. This means only users with administrative privileges can access and manage backup operations, ensuring that sensitive data remains protected under strict access control.

Backups are configured and executed directly from the **Control Panel** interface, where administrators can:

- Initiate full or partial account backups (database, files, or both);
- Download encrypted backup files for secure off-platform storage;
- Schedule and manage backup tasks;
- Restore data directly into the **Every8.Cloud** environment.

This centralized delivery method simplifies backup management and keeps all critical recovery tools within the trusted framework of the **Every8.Cloud Platform**. By consolidating control, organizations ensure consistency, compliance, and ease of use when it comes to protecting their digital operations.

WHY IT MATTERS

Your business runs on data. Losing it, even temporarily, can mean losing customers, revenue, and credibility. The Every8.Cloud Backup Module ensures:

- **Peace of mind:** your system can be recovered at any moment.
- **Operational flexibility:** clone, test, or replicate environments freely.
- **Security and compliance:** protect data from both digital threats and human errors.

**You think BIG,
we scale BIGGER!**

GET STARTED!

To activate the Backup Module or explore advanced setup options like automated synchronization, reach out to our support team or your Every8.Cloud account administrator.
