

Every8.Cloud

On-Premises Edition

NOVEMBER 2024

- At **Every8.Cloud**, we're dedicated to what matters most: delivering real value to our customers. With a relentless focus on top performance, high availability, and rock-solid security, we make sure our clients experience cloud services that are dependable, powerful, and always there when you need them. Our primary focus remains on delivering PaaS-based solutions, but we also understand the importance of onpremises solutions, especially for companies with extensive in-house infrastructure and specific requirements for data security and integrity. In this document, we outline the core features of the **Every8.Cloud On-Premises Edition**.

 **Custom backup rules**

 **Unlimited scalability**

 **Full control of your data**

 **Custom replication**

 **Unlimited data storage**

 **Custom firewall rules**

DELIVERY

The **Every8.Cloud On-Premises Edition** is a fully functional version of the Every8.Cloud Platform, tailored for use within an organization's existing technological infrastructure. To provide maximum compatibility and flexibility, the **Every8.Cloud On-Premises Edition** comes in various deployment options.

The **On-Premises Edition** is delivered as a Virtual Appliance for Windows and Linux (VMware Edition & MS Hyper-V Edition), including the following technological components:

- **Debian 12 (64-bit) Operating System**
- **Apache2**
- **PHP 8.1**
- **MariaDB 10.11 SQL Server**
- **Built-in firewall**
- **IP address configuration via DHCP or manual setup**

The default configuration includes an internal SQL server (MariaDB 10.11) for database. It also uses internal file storage by default. However, for greater integration flexibility and custom backup requirements, you can use an external SQL server and external file storage instead.

SUPPORTED DATABASE SYSTEMS

For other specific options, please feel free to inquire.

**You think BIG,
we scale BIGGER!**

WARRANTY AND RESPONSIBILITIES

Since the **Every8.Cloud On-Premises Edition** relies heavily on the underlying hardware and the specific implementation, much of the operational responsibility shifts to the **Customer**. **Every8.Cloud** is responsible for delivering a fully functional version of the platform as per the agreed-upon specifications.

The **Customer** is responsible for the following (note that this list is not exhaustive and depends on the specific implementation of the **On-Premises Edition**):

- **Configuration and monitoring of backup creation processes;**
- **Setting up replication systems;**
- **Monitoring hardware performance;**
- **Installing and updating SSL certificates.**

LIMITATIONS

The **Every8.Cloud On-Premises Edition** does not impose any restrictions on data volume, transaction counts, or CPU usage. All limitations depend solely on the hardware and implementation specific to each case.

The user limit is determined by the number of initially purchased user licenses.

The **On-Premises Edition** can also utilize **Every8.Cloud** services such as Microsoft 365 and Gmail integration, **Every8.Cloud AI Connector**, **Every8.Cloud Messaging**, and **GoSign.Online** (this list might not be exhaustive). These integrations are available

The **Every8.Cloud** technical team is ready to assist in setting up these processes, training technical staff, and providing ongoing support to ensure smooth operation.

only during the period of active licenses with **Every8.Cloud**. If there is a need to make these services available without active **Every8.Cloud** licenses, it can be arranged for additional fees. This process may require further verification and validation by respective service providers.

The **Every8.Cloud On-Premises Edition** does not impose any additional restrictions on the use of the **Every8.Cloud Mobile App**. The standard **Every8.Cloud** app supports both the **Cloud Edition** and the **On-Premises Edition**.

UPDATES

Updates are an essential part of the evolution of any software. Given that the **Every8.Cloud Platform** provides a web interface and due to the high volatility in this field (such as browser updates, security policies, mobile platform changes, etc.), we strongly recommend keeping the system updated regularly.

The **On-Premises Edition** updates are available for an additional annual cost, which is 25% of the total value of the purchased licenses. This annual cost is directly proportional to the number of active licenses and will increase accordingly with the purchase of additional licenses.

Please note that **Every8.Cloud** may decline to provide updates if they are not activated within a certain timeframe after purchasing the **On-Premises Edition**.

Updates are delivered electronically. The installation of updates is the responsibility of the end **Customer**. The **Every8.Cloud** technical team is ready to assist in setting up these processes, training technical staff, and providing ongoing support to ensure smooth operation.

PRICING

As of the writing of this document, the price for the **Every8.Cloud On-Premises Edition** is

\$17,500

If you have any questions regarding the current pricing, please contact us for up-to-date information.

This price includes:

- **100 named user licenses**
- **Updates for 12 months following the purchase**

The price for additional packages of **100** user licenses is **\$7,500** per package.

SUPPORT

The **Every8.Cloud** technical team is always ready to provide support and, if necessary, monitor the smooth operation of the **Every8.Cloud On-Premises Edition**. Various support packages are available depending on the specific implementation and customer needs.

Please contact us for more detailed information.

The Every8.Cloud On-Premises Edition is built to seamlessly integrate into your existing infrastructure while offering the flexibility and security your organization demands. With multiple deployment options, industry-standard technologies, and strong support, we make sure you can rely on a powerful, customizable cloud experience that fits your needs.
